"Boot Camp" with Windows installation Guide for Tactical Sailing

Friedrich E. (AUT): "I hope I can also offer a solution to others with this problem, but it is certainly not THE SOLUTION for everyone. I am not an expert myself, but I have always been concerned with the matter. I have a MacBook Pro (Retina, 13-inch, Mid 2014) with the processor 2.6 GHz Dual-Core Intel Core i5. Since I have several programmes that only run on Windows, I have also installed Windows on the Mac. Previously via Parallels but now via Apple's own Boot Camp Assistant program in the Launchpad.

This works very well, even setting up a second operating system afterwards is no problem here. Disadvantage: when switching on, you must already decide on a system - here by pressing the ALT key as soon as the sound is heard. Switching off is unusual for Mac users, but Windows runs without problems. In addition, this variant is free of charge. You only need a Windows licence key (you can get one online, or you have one).

Install Tactical Sailing(TS) on Mac "Windows" / "Ventura":

- Started Windows.
- Make sure Java is installed with the latest version.
- Install your programme (Tactical Sailing V2) via the download link (Windows version!) as described.
- Enter the TS-licence key.
- Tactical Sailing V2 program starts without problems!"

Many thanks to Friedrich E. (AUT) for his description of his solution!
Here is also a link to you Tube an explanation of how to install Windows with Boot Camp Assistant. https://youtu.be/Hmm9Q-T0oTo .
